NIKE SALES PERFORMANCE

Insight Report | Power BI dashboard analysis

Source: Nike_Sales_Cleaned.xlsx | 2,500 order records | 6 regions | 5 product lines | 2 sales channels

1. Executive Summary

This report interprets the two Power BI dashboards built on the Nike sales dataset: **Dashboard 1 – Nike Sales Performance** (profit, revenue, units, region, channel and size) and **Dashboard 2 – Nike Order Flags & Discount** (profit, revenue and discount flags at order level). The business is profitable overall and performance is evenly spread across genders, regions and product lines, but the revenue field is populated for only a small share of records, so revenue-based conclusions should be validated before they drive decisions (see Section 4).

₹687.18K	₹3.44M	4,345	76.88%	6.64%
Total Revenue	Total Profit	Units Sold	Profitable Records	Records with Revenue

Headline findings

- **Balanced profit base.** Profit is split almost evenly by gender (Women 34.5%, Kids 33.0%, Men 32.5%) and by region (15.3% to 18.1%). Bangalore leads at ₹621.95K; Hyderabad trails at ₹525.09K.
- **Training is the strongest line.** It leads to revenue (₹195.6K, 28.5%), units (943, 21.7%) and profit (₹737.7K). Running is the weakest in revenue (₹72.1K, 10.5%) despite 18.3% of units.
- **Online out-earns Retail on revenue.** Online contributes ₹378.18K (55.03%) against ₹309.0K (44.97%) for Retail, while profit is split almost 50/50.
- **One in four records loses money.** 578 of 2,500 records (23.12%) are loss-making and reduce profit by ₹332.1K.
- **Discounts above 100% destroy revenue.** 180 records carry a discount above MRP and show net revenue of −₹55.2K, while the Low-discount band generates ₹715.1K.
- **Revenue data needs validation.** Only 166 records carry a revenue value; the other 2,334 show zero yet hold 93.85% of total profit.

Scope and method: every figure in this report was recomputed from the source workbook and reconciles to the dashboard values (for example total revenue ₹687.18K and the regional profit split). Currency is shown in ₹ (INR) because the dataset covers Indian cities; the Power BI visuals themselves display no currency symbol. Percentages are shares of the total unless stated otherwise.

2. Dashboard 1 – Nike Sales Performance

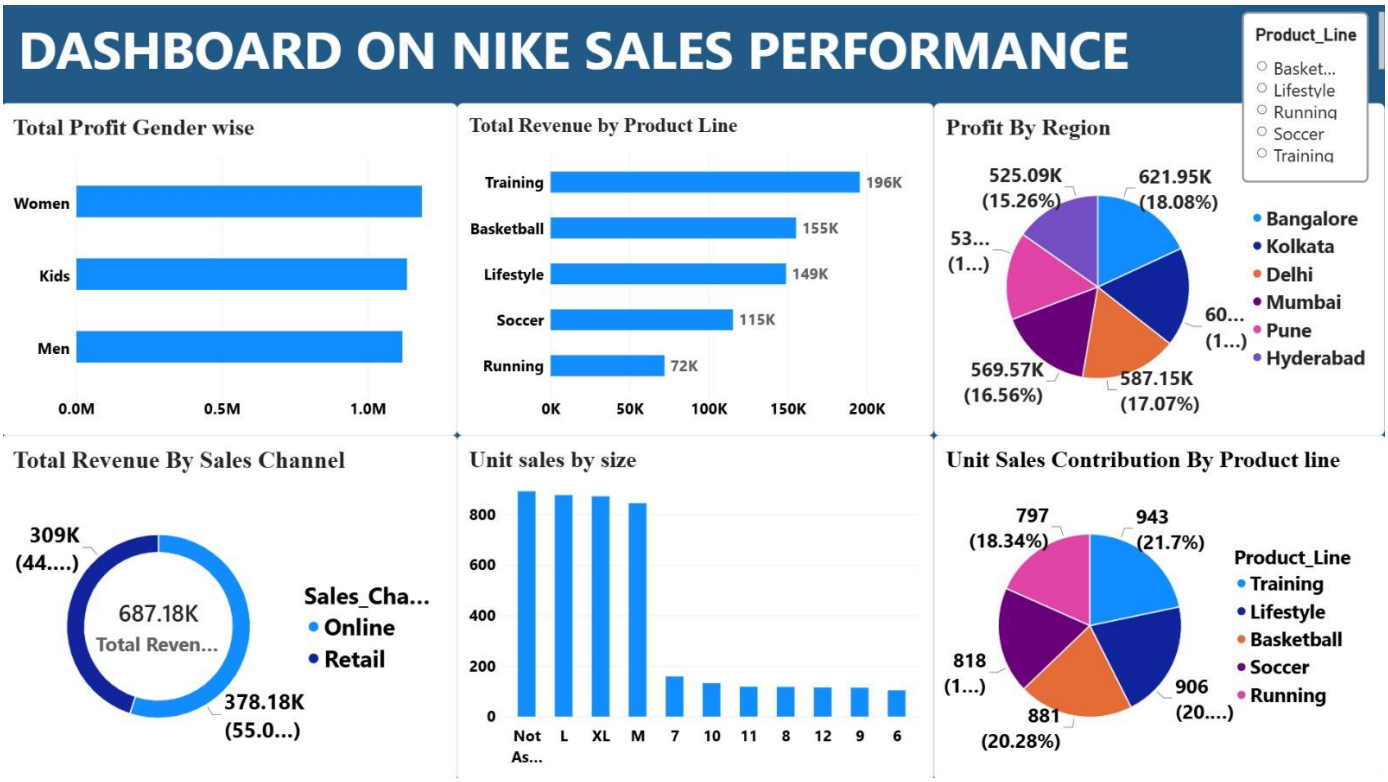

Figure 1: Dashboard on Nike Sales Performance (Power BI)

Dashboard visual	What the data shows
Total Profit – Gender wise	Women lead at **₹1.19M (34.5%)**, then Kids ₹1.13M (33.0%) and Men ₹1.12M (32.5%). The gap between first and last is only ₹66.8K (about 6%), so profit does not depend on any single gender category. Women also earn the highest profit per order (₹1,448 vs ₹1,332 for Men).
Total Revenue by Product Line	**Training leads with ₹195.6K (28.5%)**, followed by Basketball ₹155.3K (22.6%), Lifestyle ₹148.9K (21.7%), Soccer ₹115.4K (16.8%) and running ₹72.1K (10.5%). Training earns 2.7 times the revenue of Running, and Training plus Basketball together delivers 51% of revenue.
Profit by Region	**Bangalore is the largest profit pool at ₹621.95K (18.08%)**, followed by Kolkata ₹602.86K (17.52%), Delhi ₹587.15K (17.07%), Mumbai ₹569.57K (16.56%), Pune ₹533.41K (15.51%) and Hyderabad ₹525.09K (15.26%). Best-to-worst spread is ₹96.9K (about 18%), a balanced network with Bangalore as the benchmark.
Total Revenue by Sales Channel	**Online ₹378.18K (55.03%) vs Retail ₹309.0K (44.97%)**, a lead of ₹69.2K (22%). Units are almost identical (2,188 vs 2,157) and profit splits 49.8% / 50.2%, so Online's edge comes from higher revenue per record (₹301 vs ₹248), not from higher volume.
Unit Sales by Size	Of 4,345 units, **M, L and XL account for 2,594 (59.7%)**: L 877, XL 872, M 845. "Not Assigned" holds 892 units (20.5%), the largest single bucket, which limits size-level demand planning. Numeric sizes 6 to 12 total 859 units (19.8%), led by size 7 (159) and size 10 (132); size 6 is lowest (104).
Unit Sales Contribution by Product Line	Training 943 units (21.7%), Lifestyle 906 (20.9%), Basketball 881 (20.3%), Soccer 818 (18.8%), Running 797 (18.3%). **Units are evenly spread (18% to 22%), revenue is not**: Running holds 18.3% of units but only 10.5% of revenue (₹90 revenue per unit vs ₹207 for Training).

Product line	Records	Units	Revenue (₹)	Rev. share	Profit (₹)	Profit share	Revenue / unit (₹)
Training	546	943	195,553	28.5%	737,670	21.4%	207
Basketball	507	881	155,292	22.6%	676,639	19.7%	176
Lifestyle	501	906	148,871	21.7%	694,086	20.2%	164
Soccer	472	818	115,392	16.8%	673,309	19.6%	141
Running	474	797	72,076	10.5%	658,328	19.1%	90
Total	**2,500**	**4,345**	**687,184**	**100.0%**	**3,440,032**	**100.0%**	**158**

Supporting view: regional scorecard

Region	Records	Units	Revenue (₹)	Profit (₹)	Profit share	Profit / record (₹)	Loss-making
Bangalore	436	747	102,746	621,949	18.1%	1,426	22.2%
Kolkata	417	691	168,601	602,857	17.5%	1,446	21.1%
Delhi	438	757	94,972	587,149	17.1%	1,341	22.8%
Mumbai	418	772	94,999	569,568	16.6%	1,363	21.8%
Pune	388	653	101,177	533,415	15.5%	1,375	24.7%
Hyderabad	403	725	124,689	525,095	15.3%	1,303	26.3%
Total	**2,500**	**4,345**	**687,184**	**3,440,032**	**100.0%**	**1,376**	**23.1%**

Key takeaways from Dashboard 1

- **Protect and grow Training.** It is first on revenue, units, and profit; it is the natural lead line for campaigns and stock allocation.
- **Look at Hyderabad and Pune.** They have the lowest profit and the highest share of loss-making records (26.3% and 24.7% against 21.1% in Kolkata). Pricing, discount mix and returns are the first places to check.
- **Kolkata is a revenue standout** (₹168.6K, 24.5% of revenue, not shown on the dashboard) with the lowest loss rate. A revenue-by-region visual would highlight it.
- **Close the size data gap.** One in five units has no size assigned, which blocks size-curve and replenishment decisions.

3. Dashboard 2 – Nike Order Flags & Discount

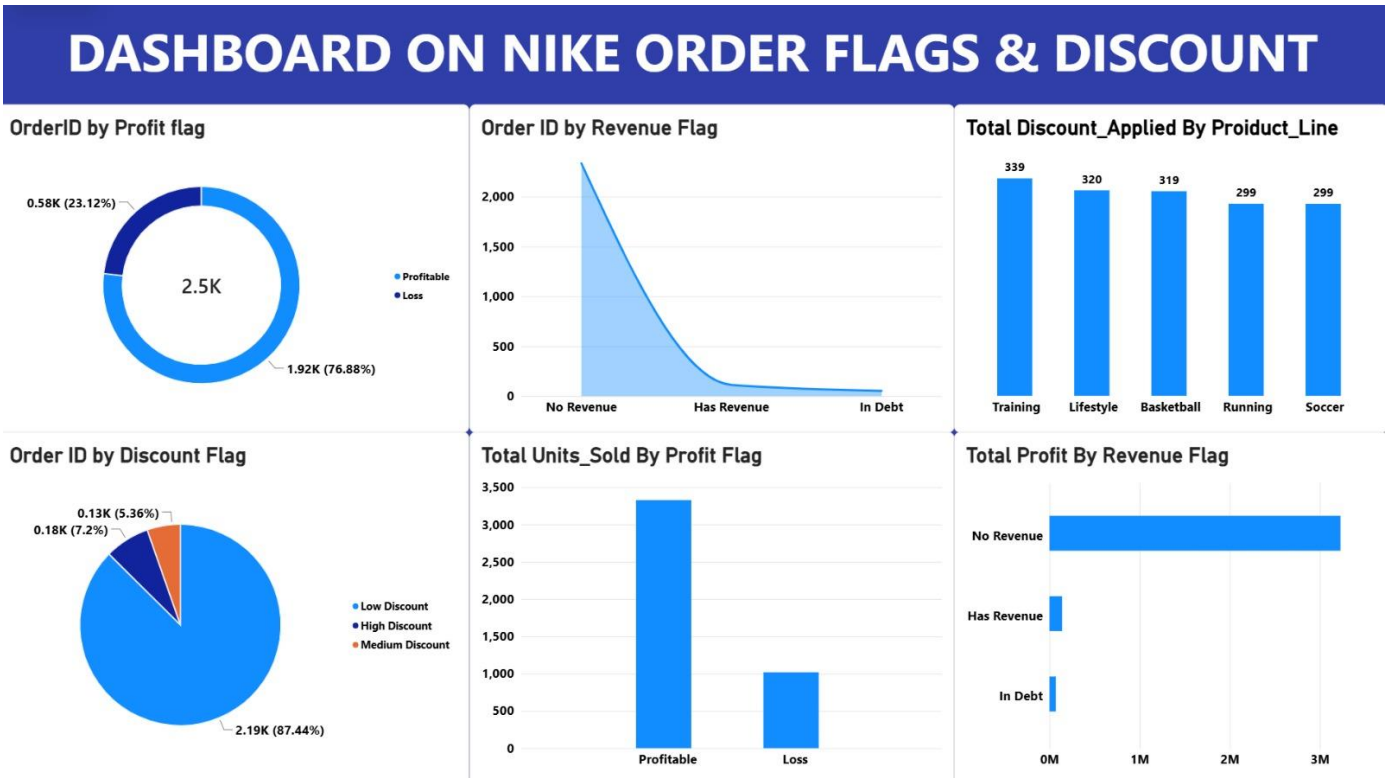

Figure 2: Dashboard on Nike Order Flags & Discount (Power BI)

Dashboard visual	What the data shows
Order ID by Profit Flag	**1,922 records (76.88%) are profitable and 578 (23.12%) are loss-making.** Profitable records generate ₹3.77M of profit; loss-making records take ₹332.1K away, leaving a net of ₹3.44M. Roughly one record in four loses money, which is large enough to justify a root-cause review.
Order ID by Revenue Flag	**2,334 records (93.36%) are tagged No Revenue**, 113 (4.52%) Has Revenue and 53 (2.12%) In Debt (negative revenue). Only 6.64% of records carry a revenue figure, which is the main caveat for every revenue visual in the project.
Total Discount Applied by Product Line	Summed discounts are Training 339, Lifestyle 320, Basketball 319, Running 299 and Soccer 299. Because discount is a rate, **these totals mainly mirror record counts** (Training has the most records, 546). The average discount is about 63% for every line (62% to 64%), so no product line is discounted harder than another.
Order ID by Discount Flag	**Low 2,186 records (87.44%), High 180 (7.2%), Medium 134 (5.36%).** The bands are Low up to 80% (average 57%), Medium 81% to 100% (average 90%) and High above 100% (average 112%). A "High" discount exceeds the MRP itself, and these 180 records show net revenue of −₹55.2K.
Total Units Sold by Profit Flag	**Profitable 3,328 units (76.59%) vs Loss 1,017 (23.41%).** Loss-making records take a slightly larger share of units than of records (23.41% vs 23.12%) and carry a higher average MRP (₹6,102 vs ₹6,021). Average profit is +₹1,963 per profitable record and −₹575 per loss-making record.
Total Profit by Revenue Flag	**No Revenue ₹3.23M (93.85%), Has Revenue ₹140.1K (4.07%), In Debt ₹71.4K (2.08%).** Almost all profit sits on records with zero revenue, and In Debt records still show positive profit. The revenue and profit fields are not reconciled, so revenue-based visuals should be read with caution until validated.

Supporting view: discount bands

Band	Discount range	Avg. discount	Records	Share	Units	Revenue (₹)	Profit (₹)
Low	0-80%	57%	2,186	87.4%	3,804	715,072	2,992,504
Medium	81-100%	90%	134	5.4%	220	27,308	206,060
High	101-125%	112%	180	7.2%	321	-55,195	241,468
Total		**63%**	**2,500**	**100.0%**	**4,345**	**687,184**	**3,440,032**

Supporting view: revenue flags

Revenue flag	Records	Share	Revenue (₹)	Profit (₹)	Profit share	Avg. discount
No Revenue	2,334	93.36%	0	3,228,531	93.85%	63%
Has Revenue	113	4.52%	802,563	140,102	4.07%	47%
In Debt	53	2.12%	-115,378	71,399	2.08%	89%
Total	**2,500**	**100.00%**	**687,184**	**3,440,032**	**100.00%**	**63%**

Supporting view: profit flags

Profit flag	Records	Share	Units	Unit share	Profit (₹)	Profit / record (₹)	Avg. MRP (₹)
Profitable	1,922	76.88%	3,328	76.59%	3,772,158	1,963	6,021
Loss	578	23.12%	1,017	23.41%	-332,126	-575	6,102
Total	**2,500**	**100.00%**	**4,345**	**100.00%**	**3,440,032**	**1,376**	**6,040**

Key takeaways from Dashboard 2

- **Discount depth matters more than discount type.** Revenue comes almost entirely from the Low band (₹715.1K); Medium adds ₹27.3K and High removes ₹55.2K.
- **Average discount is about 63% on an average MRP of about ₹6,040.** This is deep for a premium brand and worth checking against pricing policy and how the discount field is scaled.
- **Loss-making orders are not driven by the product line.** Loss rates sit at 22% to 24% in every line, which points to order-level causes such as returns, discount over-rides or cost allocation.

4. Data Quality Notes and Limitations

The checks below were run on the source workbook. They do not change the dashboard totals, but they affect how far the insights above can be trusted.

Observation	Evidence from the data	Impact
Revenue populated for only 166 of 2,500 records	The other 2,334 records show revenue of 0 but hold ₹3.23M (93.85%) of profit. Total profit (₹3.44M) is about 5 times total revenue (₹687K). Where revenue is present, it equals Units × MRP × (1 – Discount) in all 166 cases.	Zeros look like missing values rather than true zero sales. Revenue, channel and product-line revenue conclusions may be understated.
Discounts above 100%	180 records have a discount between 101% and 125% of MRP and show net revenue of –₹55.2K.	Likely a data-entry or scaling issue; creates negative revenue.
Negative and zero units	205 records (8.2%) have negative units and 224 (9.0%) have zero units.	Returns and cancellations are not separated from sales.

Observation	Evidence from the data	Impact
Duplicate Order IDs	114 duplicates: 2,500 rows but only 2,386 unique Order IDs. The “2.5K” tile counts rows, not distinct orders.	Order counts may be overstated by about 4.6%.
Missing dates and sizes	The order date is “Not Present” in 616 records (24.6%); size is “Not Assigned” in 510 records (892 units, 20.5%).	Blocks trend analysis and size-level planning.
Deep average discount	Average discount is 63% on an average MRP of about ₹6,040.	Verify the field scale before using it for pricing decisions.

5. Recommendations

1. **Reconcile the revenue field first.** Recompute Revenue = Units × MRP × (1 – Discount) for all records, or confirm that the zeros are genuine, then refresh the revenue visuals and re-validate the channel and product-line conclusions.
2. **Review discounts above 100%.** Set an approval rule or validation cap and check the 180 affected records for entry errors.
3. **Prioritise Training and investigate Running.** Training leads to every measure. Running earns the lowest revenue per unit (₹90) yet the highest profit per unit (₹826), another sign that revenue needs validating before pricing decisions are made.
4. **Run a loss review for Hyderabad and Pune.** Their loss-making share (26.3% and 24.7%) is well above Kolkata (21.1%). Check discount mix, returns and cost allocation.
5. **Keep both channels and test Online conversion.** Profit is equal across channels, so the aim is to lift Online revenue per record without eroding Retail.
6. **Fix capture of size, date and Order ID at source.** Add validation so size and date are mandatory and Order IDs are unique; then add a time-trend page to the dashboard.
7. **Polish the dashboards.** Show average discount % instead of summed discount, replace the area chart on Order ID by Revenue Flag with a column chart (the categories are not a continuous series), correct the “Proiduct_Line” typo in the Dashboard 2 title, and avoid truncated pie labels.
